

***Struggling with
storage space for
your building control
case files?
Looking for a clever
solution?***

Data Insight has solved many similar problems and worked with over 150 Councils on more than 400 projects.

Performance Standards

In June 2006 the Building Control Advisory Committee devised a set of performance standards for Building Control departments. A section of those performance standards dealt with the issue of archiving building control records.

It proposes that building control departments archive up to 15 years worth of hardcopy records either in an electronic format or as microfiche records.

Experience of working with other building control and planning departments indicates that the issues faced by building control officers will be primarily one of funding for electronic capture, but also the lack of archiving space if hardcopy files are retained.

Data Insight offers services providing intelligent solutions to these problems. Options range from initial consultancy to 'cold' storage of paper documents.

Our services include the following:

Feasibility studies

Consultancy services

Document scanning of each file

Large format scanning of each drawing

Records management with 30 minute 'scan on demand' retrieval service

Cold storage with 24hr 'hand' delivery

Web server delivery

Documents linked to GIS/Caps Uniform

If there is a requirement for electronic management software, then Data Insight can provide the complete solution by incorporating IRISEDMS.

If you are struggling with the lack of space for storage or funding then why not contact us to discuss the various options available to you, including spreading the cost over longer periods.

We offer a variety of solutions from complete scanning, part scanning and part storage, through to total storage with complete records management. A 'scan on demand' retrieval service with electronic delivery via our web server is also available.

Data Insight has vast experience of working with local authorities. In fact, 95% of our business is either GIS Digitisation of paper maps/records or document scanning for Planning, Building Control, Property, Housing and Highway departments.

We have a first class reputation with technical references from more than 300 local authority officers.

If you would like further information or for us to visit your offices to discuss your requirements, then please contact us on:

IRISEDMS

IRISEDMS comprises three modules: IRISScan, IRISQC and IRISView.

Documents and plans are initially scanned using IRISScan software and the resulting images quality checked using IRISQC. Images can be viewed using IRISView by searching for an application number or alternatively, the user can use their GIS software to simply click on the application boundary and view the associated documents.

Main features include: one keystroke scanning process, print documents and drawings to original size, annotation tools, measurement tool, links to GIS and integration with Microsoft Office.

Main features include

- Record management
- Document management
- Scanning software
- Quality control software
- Integration with MSOffice
- Links to GIS
- Link to AutoCAD
- Web enablement (coming soon)

Measuring Tool options include

- Length measurement
- Perimeter measurement
- Area measurement
- Volume measurement
- Calibration option to measure image where there is no scale
- Angle of sight
- Fee calculator

Annotation options include

- Highlight text in different colours
- Sticky notes
- Draw diagram facility
- Add text facility
- Rubber stamp creator
- Separate confidentiality view
- Thumbnail view
- Indexer and delete facility
